Pro Finish Pad: #4 Black

Rotary Speed lowest speed
- 1000 rpm
Orbital Speed 1500 opm
Porter Cable 1.5

Sizes Available:

- 16oz.(BX114-16),
- Gallon(BX114-G)

Color: Black

Detail: Black Max is formulated to quickly and easily remove stubborn fine polish lines and micro swirls left behind by more aggressive buffing compounds often noticed in direct sunlight. By polishing the finish with Black Max the depth and brilliance of shine is dramatic even without a wax or sealer. Black Max is particularly effective on dark colors, multi-step pearl colors, and colors with metal flake. Black Max will leave the painted or plastic surface ready to be sealed.

Directions For Use:

Shake well before use. Clean and dry all surfaces. Black Max can be applied by hand or with a polishing buffer. **Hand Use:** Dispense a small amount to desired area and rub in a circular motion until product is almost completely dry. Buff dried residue off with separate clean soft terry or micro fiber cloth. **Machine Buffer:** Dispense a small amount to desired surface and spread evenly using the face of the buffer pad or the #4 Black Pro Finish pad. Move buffer in back and forth and up and down motion until product is almost completely dry. Remove dried residue with soft micro fiber cloth. For best results follow with BRITEMAX Extreme Elements. Keep product from temperature extremes.
