 1000 rpm
Orbital Speed lowest speed
 1500 rpm
Porter Cable 1

Sizes Available:

- 16oz. (BX115-16),
- Gallon(BX115-G)

Color: Blue

Detail: Extreme Elements is a durable resin polymer sealant used to protect against acid rain, bird droppings, salt water, and arid climates. Seals with optical clarity and adds a deep shine to painted surfaces, glass, and polished metals. Extreme Elements can be applied in direct sunlight and provides unparalleled durability and excellent UV protection. Due to its high melting point, Extreme Elements will not soften and gather debris in hot climates. Multiple applications on paint and gel coat create a deeper shine and increased durability. Excellent for use on shower and tub walls to resist soap scum build up.

Directions for Use: Shake well before use. Clean and dry all surfaces thoroughly so no dirt particles remain on the surface to be coated. Apply Extreme Elements with a soft applicator or #5 Blue Pro Finish applicator pad sparingly but evenly to all desired surfaces. Let dry completely to grayish haze. Remove dried surface residue with a soft cloth or micro fiber. The best environment for application is either direct sunlight or a heated area (between 50 and 90 degrees). Multiple applications will provide greater protection and a higher surface luster. Allow 6 hours between applications. Product is completely cured within 24-48 hours. Keep product from temperature extremes.
