CAUTION: MAY CAUSE EYE OR SKIN IRRITATION.
HARMFUL OR FATAL IF SWALLOWED. READ PRECAUTIONS
NET WT. 16 FL. OZ. (473 ML)

Final Shine Metal Polish & Sealer

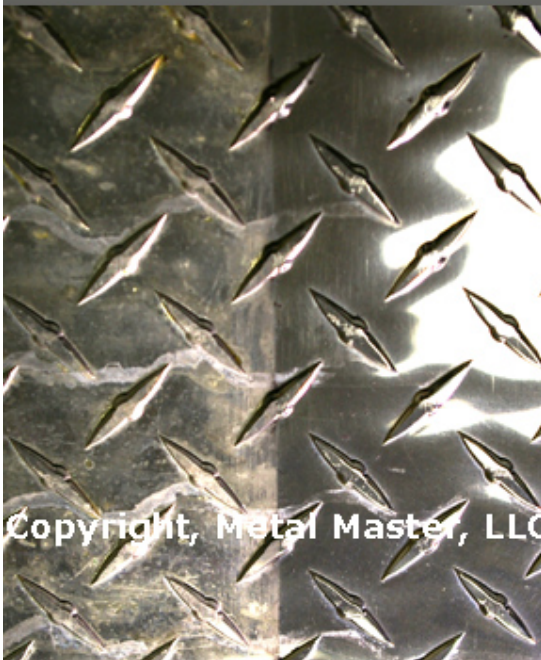

High luster finishing cleaner/polish and sealer for bare metal surfaces.

Sizes Available:

16oz. (BXMPFS-16)

8 oz. (BXMPFS-8)

Before / After

Detail: Removes light oxidation from bare metals and light to medium staining on chrome and stainless steel. Provides a “chrome like” appearance on polished aluminum with a protective seal on the surface that lasts for months even when exposed to weather. Final Shine does not have the accelerated cleaning power of Easy Cut but contains a ultra durable protective elements. This product is designed to create a show quality finish that stands up to harsh elemental attacks such as moisture, wash solvents, road grime, salt air, and other environmental attacks. After the surface is polished with Final Shine and is let to dry completely, a micro thin layer of protection that is hard, clear, and very element resistant remains on the surface. Final Shine feels almost like oil when it is being applied. No binding feel while polishing makes it very easy to work with and a very small amount is all that’s needed to polish a large area. When completely dried and the residue is wiped off, the results are dramatic. Polished aluminum looks like chrome. Even after washing with a 3000psi power washer it will look the same. The two greatest attributes are that it is quick and easy to use and the finish it leaves is amazing. Also not for use on plated or anodized metals (will remove this type of coating).
