

#3 Perfect Prep / Ultra Fine Abrasive Polish

Fine abrasive polish for removing swirl marks and minor surface problems.

Recommended
Pro-Finish Pad: White

Rotary Speed 1700 - 2500 rpm
Orbital Speed Up to 2500 opm
Porter Cable 2.5

Sizes Available:

- 16oz.(BX113-16),
- Gallon(BX113-G)

Color: White

Detail: Perfect Prep is safe to use on paint, gel coat, and, polished fiberglass, and plastics to remove swirl marks/minor surface problems, and clean all old waxes, polishes, and embedded dirt from the surface. Perfect Prep does not trap dirt or particles but removes these luster robbing agents. Many other products do not remove scratches but fill them giving the clean appearance but will wash off with the imperfections reappearing. Because of its unique component structure, Perfect Prep will polish within the scratch leaving the surface smooth and clean with a deep shine. It looks like a wax after it is wiped dry. Perfect Prep will not load when used on a buffing wheel and is easy to use by hand.

Effective on 1500-2000 Grit sand lines *depending on the type of paint.

Directions for Use: Shake well before use. Clean and dry all surfaces. Perfect Prep can be applied by hand or with a polishing buffer. **Hand Use:** Dispense a small amount to desired area and rub lightly in a circular motion. When desired results are achieved buff dried residue off with separate clean soft cloth (terry or micro fiber style is preferred). **Machine Buffer:** Dispense a small amount to desired surface and spread evenly using the face of the buffer pad or the #3 White Pro Finish pad. Move buffer in back and forth and up and down motion until desired results are achieved. Remove dried residue with soft cloth or soft composition buff. For best results follow with BRITEMAX #4 Black Max and Extreme Elements. Keep product from temperature extremes.
