

## #6S Spray & Shine Non-Silicone Detail Spray

High gloss “wet look” detail  
spray for quick shine on

**Sizes Available:**  
24oz. Spray(BX117-24),  
Gallon(BX117-G),

**Brief:** High gloss “wet look” detail spray for quick shine on clean, painted surfaces.

**Detail:** Very quick and easy to use. Creates a beautiful “wet look” shine on painted surfaces. True wax components. Will not leave streaking after it is dry buffed. Cleans chrome quickly with excellent results. Excellent for use on glass. Unlike silicone based products, this product leaves the surface anti-static so dust does not stick on the surface and can be lightly wiped away without smearing. Additionally, because it does not contain freely atomized silicone, it can be used in body shop environments right before delivery of the vehicle even shortly after being painted. Noticeable durability over other spray wax products.

**Directions for Use:** Shake well before use! Spray onto desired surface and spread evenly with a soft cloth. With reverse side of cloth or another soft cloth, buff lightly and repeat on all desired surfaces. That's it! Can be applied to wet vehicle and will buff to a shine while drying the vehicle with soft towel or chamois. Repeat applications can be applied as often as desired without compromising clarity. Keep product from temperature extremes. If product becomes frozen let thaw and shake rigorously to reestablish consistency.
